2015 Workshop: URSI ISWG World Day Meeting

Long title
Coordinated ISR observation days for 2016
Conveners
Ian McCrea
Emma Spanswick
Description

This is the regular meeting to determine the incoherent scatter World Day runs for next year, which occurs at every CEDAR meeting. Representatives from each of the global ISRs will be involved together with members of the user community who have proposed potential programmes. The meeting will consider the proposals which have been submitted and down-select/amalgamate programmes appropriately, to produce the final World Day calendar. Facility requirements and durations of particular runs will also be considered.

Justification

This is a regular event at each CEDAR meeting and is the essential meeting for planning the Incoherent Scatter World Days for the following year. See the description below.
