

2023 Workshop: Atmospheric waves

Long title

Waves in the near-space region

Conveners

Katrina Bossert

Sharon Vadas

Komal Kumari

Zishun Qiao

vasha@nwra.com

Description

This session will focus on waves and atmospheric coupling associated with waves and wave-wave interactions. This includes gravity waves, planetary waves, tides, and other wave phenomena in the atmosphere/near-space region. We invite presentations including theory, modeling, and observations.

Justification

Waves are a significant driver of day-to-day variability in the thermosphere/ionosphere system, and are associated with both coupling from below and forcing from above. Additionally, there are still many questions regarding wave-wave interactions (e.g. planetary wave or tidal filtering of gravity waves) and generation mechanisms for waves in the thermosphere. This open-ended session will provide an opportunity to share new research on this topic.

Related to CEDAR Science Thrusts:

Encourage and undertake a systems perspective of geospace

Fuse the knowledge base across disciplines in the geosciences

Workshop format

Short Presentations

Keywords

Gravity waves, tides, planetary waves, instabilities
