

# Space Weather and the Ionosphere

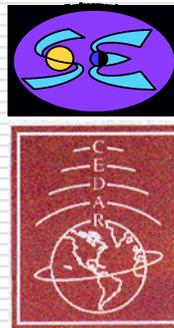

---

Dr. Thomas J. Bogdan

Director

Space Weather Prediction Center

Boulder, CO 80305

## ORIGINS OF THE IONOSPHERE

---

The ionosphere is that part of the upper atmosphere where free electrons occur in sufficient density [to have an appreciable influence on the propagation of radio frequency electromagnetic waves].

Less than 1% of constituents are ionized

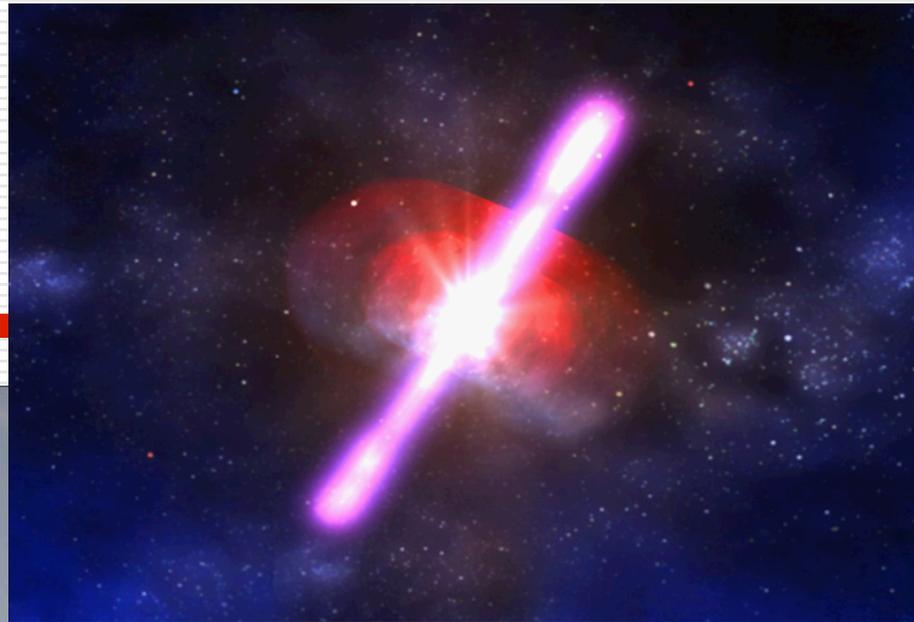

Lower boundary at ~ 60 km

Upper boundary at ~ 1000 km

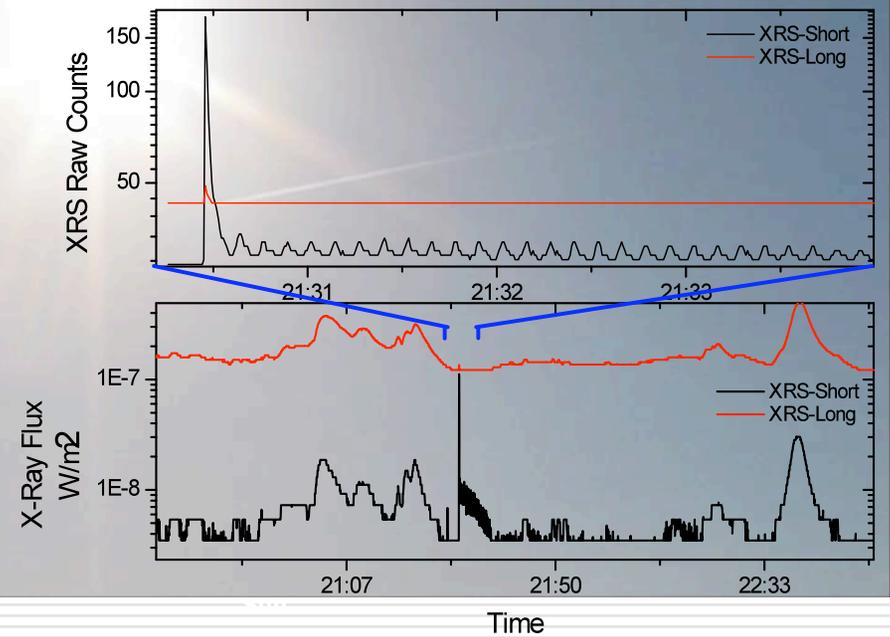

State variables: global electron density  $n$

---

# ORIGINS OF THE IONOSPHERE

$$dI/dz = +\sigma NI$$

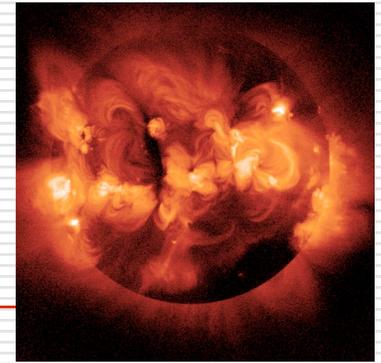

$$d(N+2n)/dz = -\nu(N+n)$$

$$\sigma NI/E = \nu a^2 n^2$$

		as $z \rightarrow +\infty$	as $z \rightarrow -\infty$
$I(z) :$	erg/cm <sup>2</sup> /s	$I_0$	0
$N(z), n(z) :$	#/cm <sup>3</sup>	0, 0	$\infty, 0$

## ORIGINS OF THE IONOSPHERE

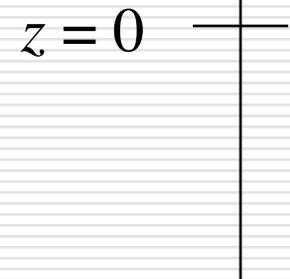

$$dI/dz = +\sigma NI$$

$$\sigma NI/Eva^2 = n^2$$

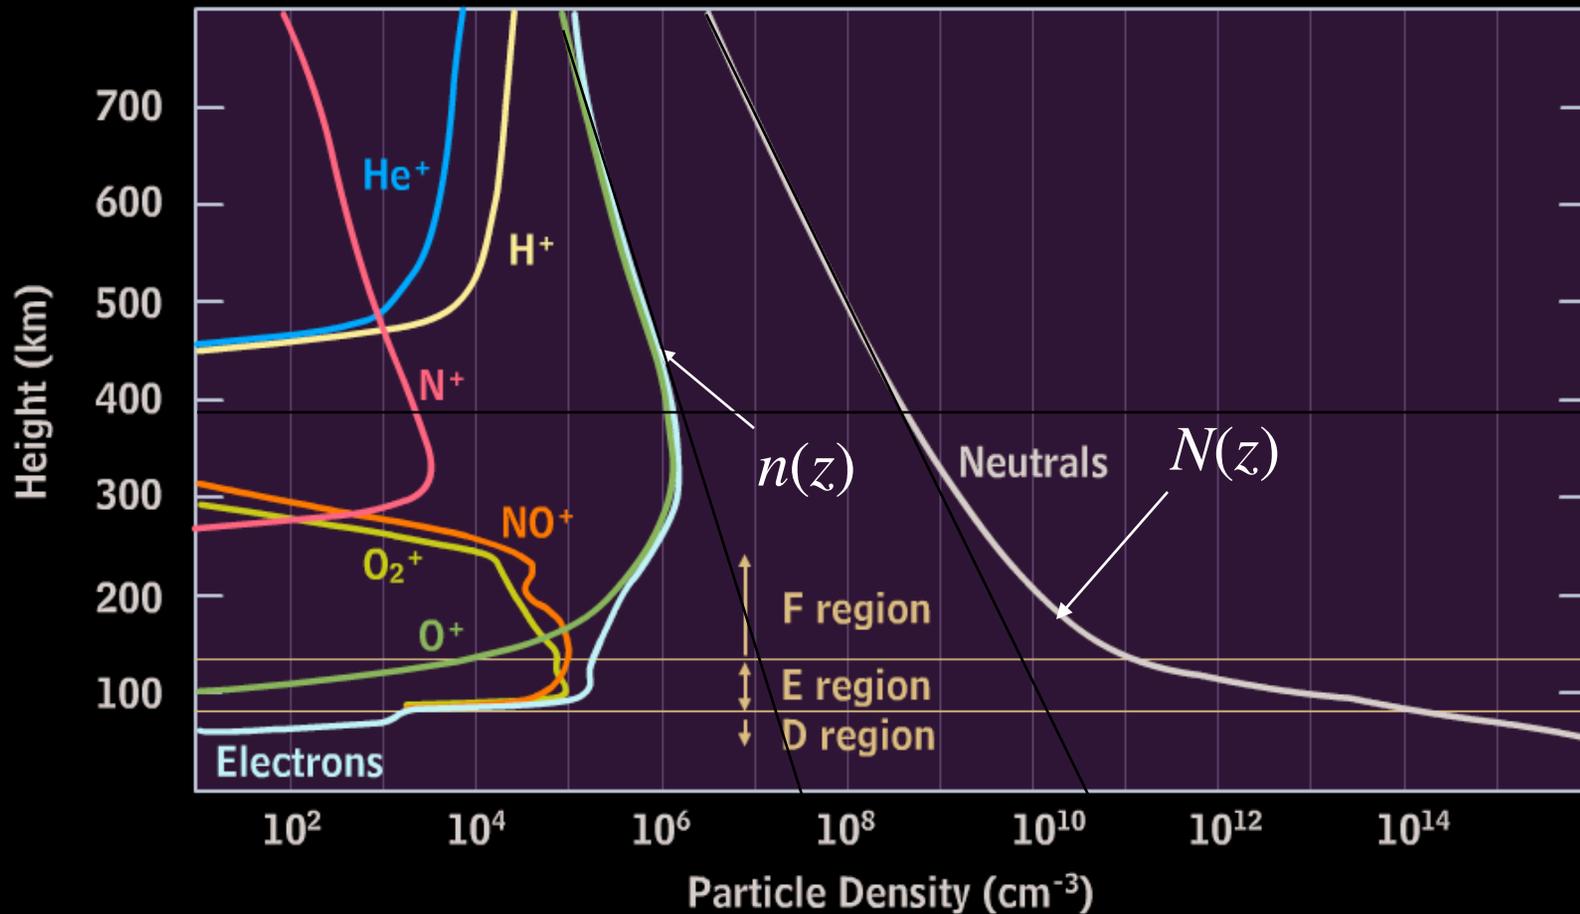

$$I_0/Eva^2 = \int n^2 dz$$

$$\text{finite} = \int n dz \quad !!!!!$$

$$\text{infinite} = \int N dz$$

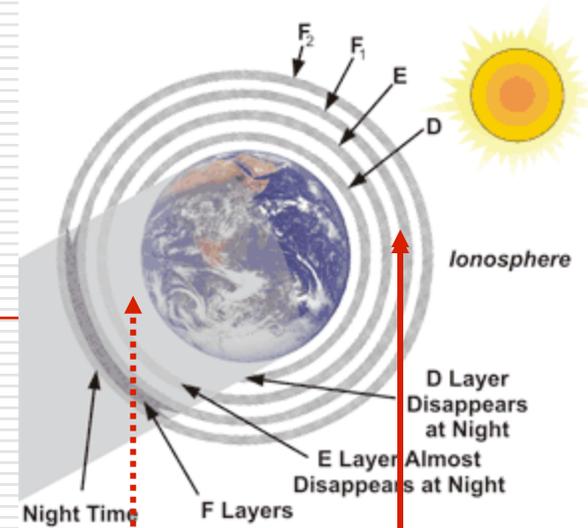

## Principal Constituents of the Ionosphere (45° N, Equinox)
