

Studying Gravity Waves using Mesoscale-Resolving Whole Atmosphere Community Climate Model

Han-Li Liu

High Altitude Observatory

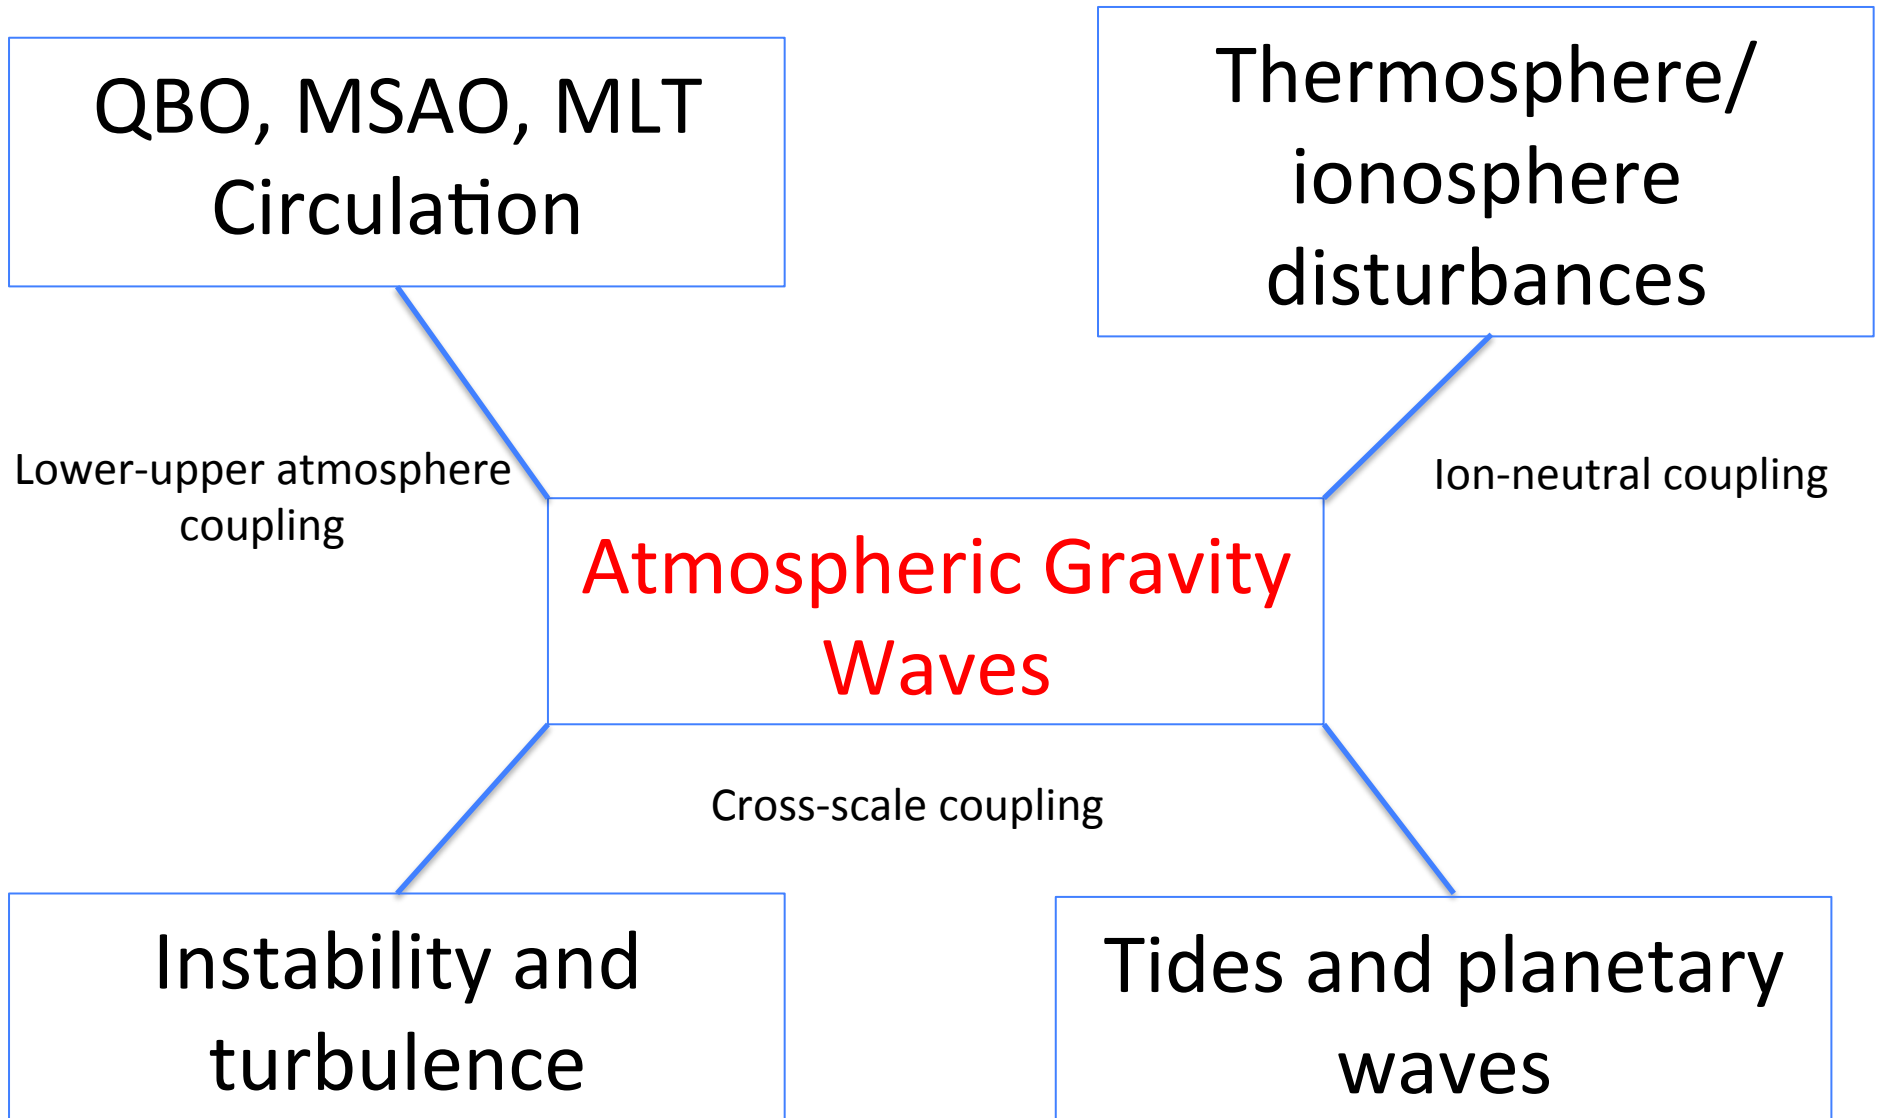

National Center for Atmospheric Research

NSF CEDAR Workshop, Seattle, WA 21-25 June 2015

Motivations: A Central Theme for CEDAR Research

Challenge: From wave sources to their impacts in a global context.

MLT Gravity Wave Observations

Resolving Mesoscales Globally: WACCM

- NCAR Whole Atmosphere Community Climate Model (WACCM)
 - Continuous Galerkin spectral finite element dynamical core
 - Solved on cubed-sphere—no polar singularity.
 - Resolution: $\sim 0.25^\circ$ (25km) horizontal; 0.1 scale height (500-700m) vertical (WACCM NE120NP4/L209).
 - Scalable up to 10000+ cores on NSF NWSC/Yellowstone.
- GW parameterization turned off: to evaluate resolved waves.
- Completed 1.5 model year simulation.

Vertical winds: tropopause to lower thermosphere

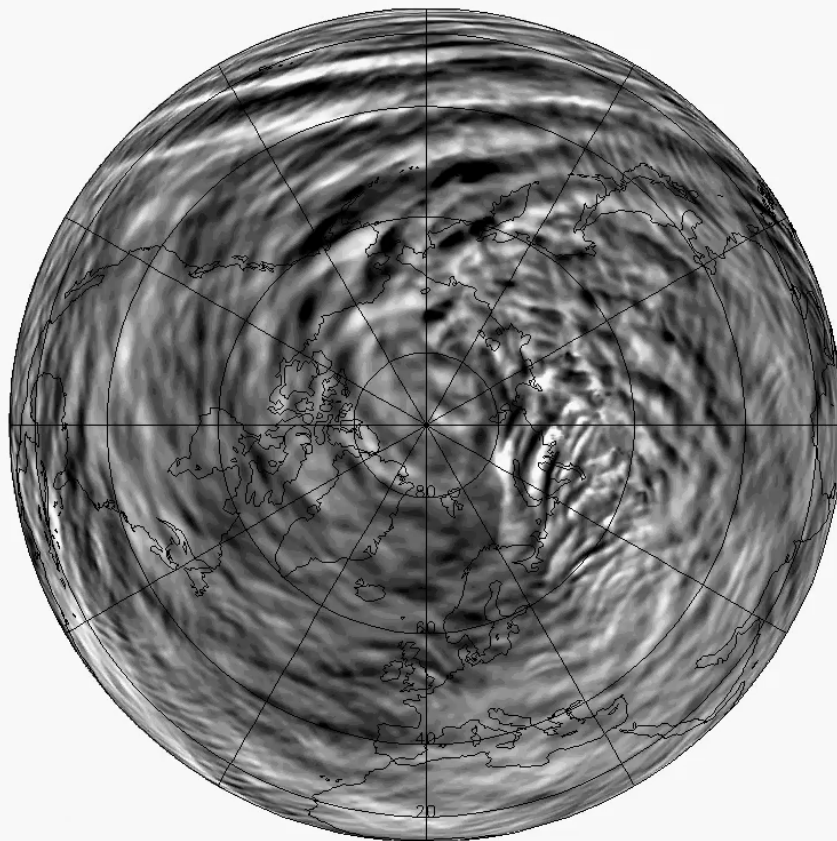

V [m/s], 04Feb 1 00:00

V [m/s], 05Feb 1 00:00

Altitude Dependence of Temporal/Spatial Scales

Vertical wind at 10hPa: July

Vertical wind at 3.5×10^{-2} hPa: July

w (m/s) at 208hPa July 1 UT 0

w (m/s) at 10hPa July 1 UT 0

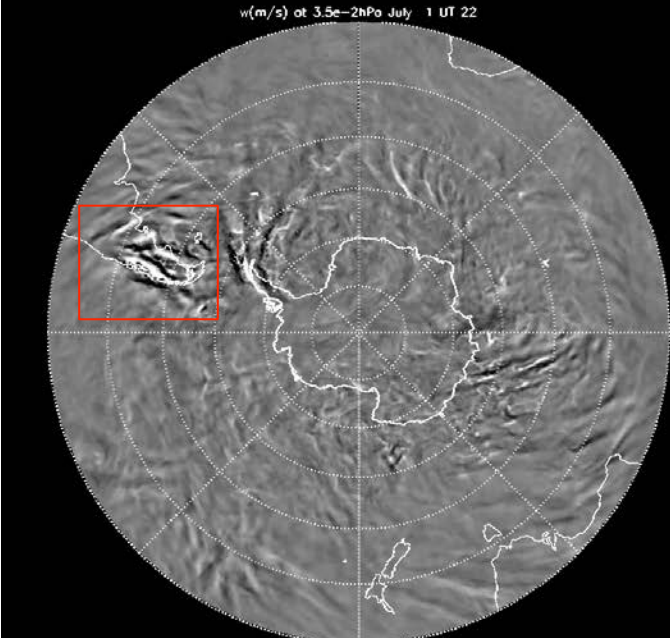

w (m/s) at 3.5e-2hPa July 1 UT 0

w (m/s) at 2.6e-4hPa July 1 UT 0

v (m/s) of $3.5e-2$ hPa July 4 UT 13

w (m/s) of $2.6e-4$ hPa July 4 UT 13

w(m/s) at 208hPo July 6 UT 8

w(m/s) at 10hPo July 6 UT 8

w(m/s) at 3.5e-2hPo July 6 UT 8

w(m/s) at 2.6e-4hPo July 6 UT 8

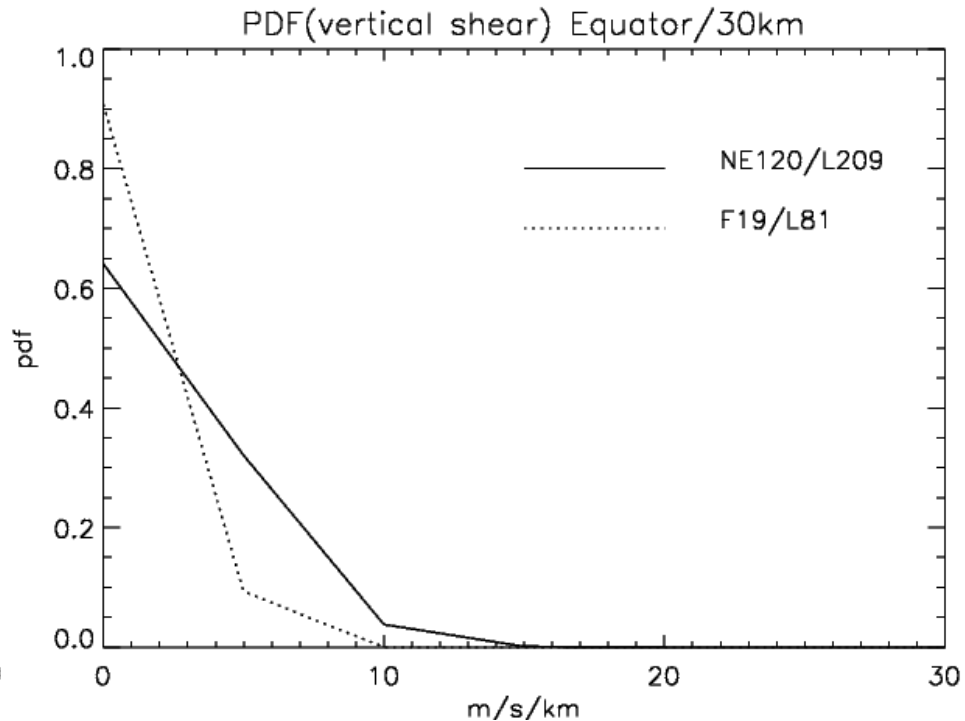

Power Spectrum Density: Altitude Dependence

What's Resolved, and What's Not

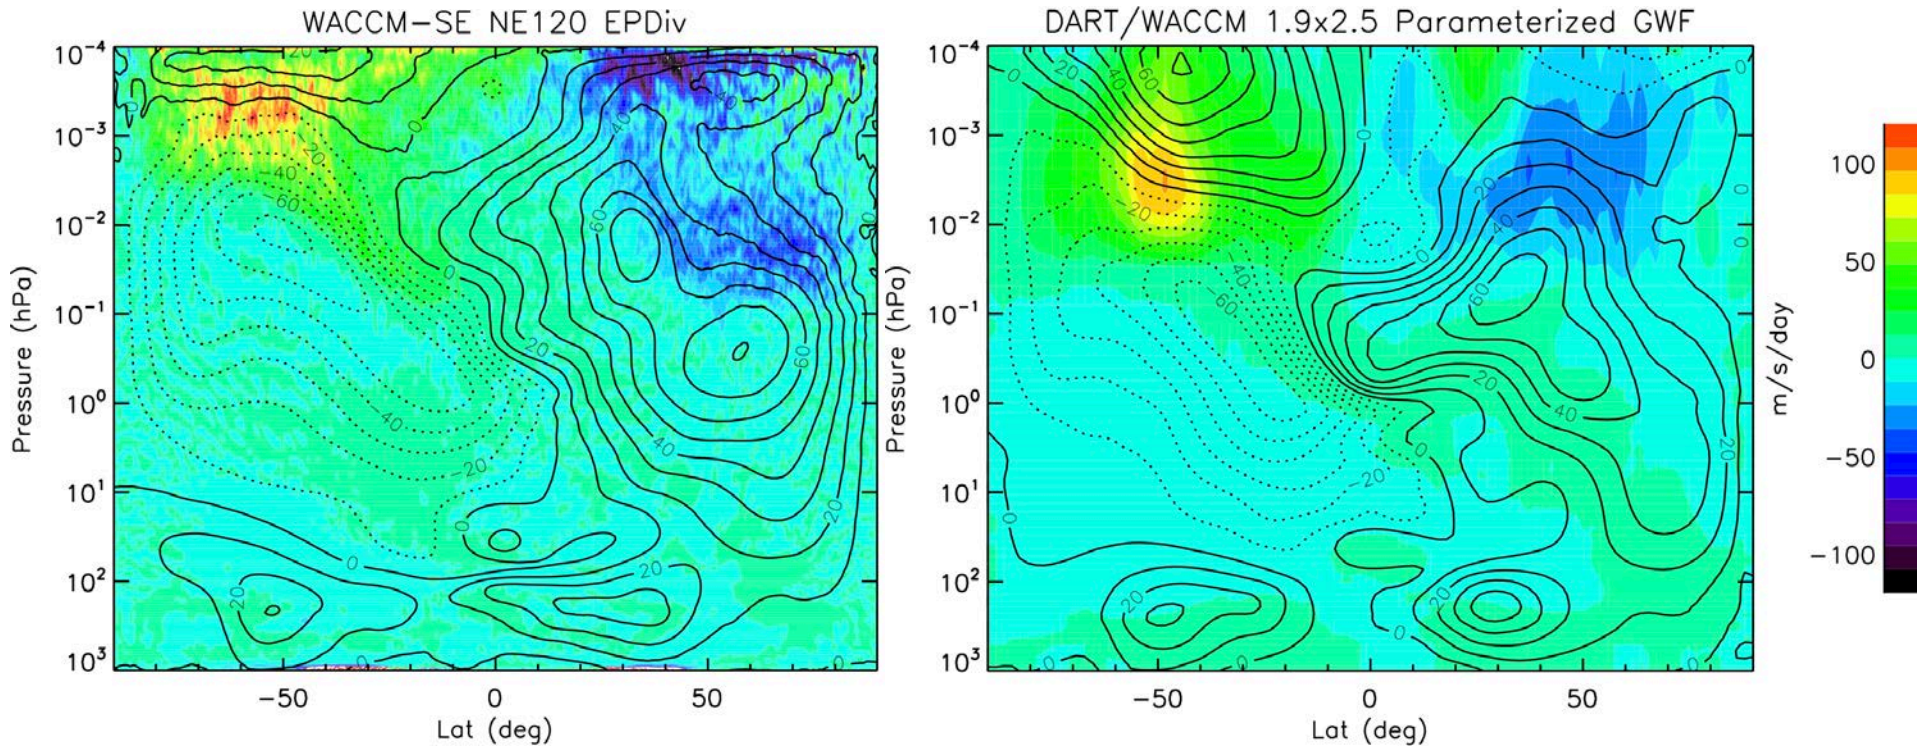

Figure 11. Superposition of the shear magnitude profiles for all of the low-latitude and midlatitude data.

Zonal Wind and GW Forcing

Liu et al., 2014

Summary

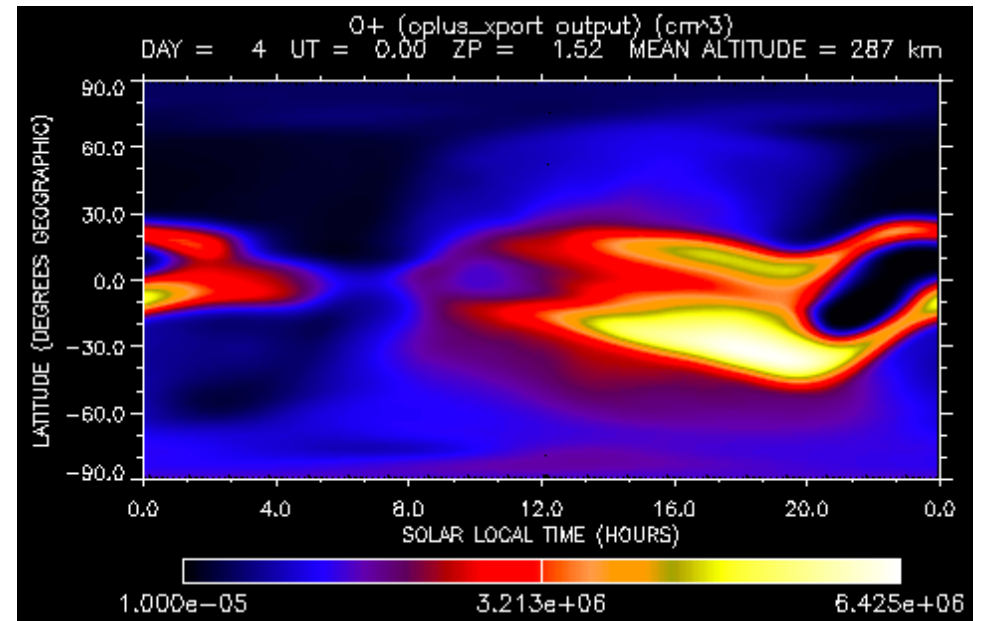

- Mesoscale-resolving WACCM is a valuable tool to gain insights of GW dynamics in the middle/upper atmosphere.
- Gravity waves play an increasingly significant role in the upper atmosphere. They contribute to the large winds and shears in the MLT, and are not accounted for in models where these waves are absent.
- Evaluation of gravity waves
 - Resolved GWs generally agree with satellite observations (distribution and seasonal variation).
 - Resolved GW forcing is not large enough to reverse the winter stratospheric/mesospheric jet.
 - Resolved GW forcing can reverse summer stratospheric/mesospheric jet, but still weak and altitude is too high.
- Impacts of these waves in ionosphere/thermosphere?
