Revisiting the relationship between PRE and ESF with Jicamarca ISR measurements made over the past 2 solar cycles

F. S. Rodrigues¹, J. M. Smith^{1,*}, B. G. Fejer², and M. Milla³

The University of Texas at Dallas, Richardson, TX, USA

 * Now at Texas Instruments, Dallas, TX
 2. Utah State University, Logan, UT
 3. Jicamarca Radio Observatory, Lima, Peru

2016 Joint CEDAR-GEM Workshop, Santa Fe – NM, June 19-24, 2016.

- F-region height (controlled by PRE) is recognized as the most important parameter controlling ESF (e.g. Fejer et al., 1999; Basu et al., 1996; Abdu, 2001; Anderson et al., 2004; Retterer and Gentile, 2009, etc.)
- To which extent can ESF be explained by evening vertical drifts alone?
- Follow-up of the study by Fejer *et al.* (1999)
 - Used JRO ISR measurements between 1968 1992
 - Considered weak (BT) and strong (BS and TS) ESF
 - Proposed that most of ESF occ. can be explained by the PRE

Motivation

- 1. Absence of ESF when drifts < ~0 m/s (Smith *et al.*, JGR, 2015)
- 2. Studies suggesting different threshold values for PRE
- 3. Higher quality drift measurements started in 1994 (Kudeki *et al.*, 1999)
- 4. SNR and drifts available: Allows for different metrics for PRE intensity and ESF severity

Analysis

Analysis

- Measurements between 1994 and 2013 (~380 days)
- Climatological analysis:
 - Only quiet-time measurements: Kp + 3 previous values < 4
 - Only drift measurements with error < 2 m/s
- PRE vs ESF analysis:
 - Drift measurements between 1700 and 2000 LT
 - CS measurements between 1900 and 2400 LT

AMISR-14 Observations

AMISR-14 Observations

Summary

- In general, the overall behavior of ESF occurrence can be explained by mean vertical drift patterns as shown by Fejer et al. (1999).
- Cases of no topside ESF despite large PRE peaks
- "Threshold PRE" varies with season and solar flux but more measurements are needed to test identified thresholds for MSF and HSF conditions
- We found an higher than expected occurrence rate of post-midnight F-region irregularities during December solstice LSF: SSW
